SUMMARY

Integrations Manager at Qlub, a multi-country QR pay-at-table payments platform, owning POS integrations and restaurant onboarding for the US market. 14 years in software, moving from engineer to tech lead to product, with three managerial roles along the way. Built fintech, accounting, legal-ERP and gamification systems, and since 2025 has managed payment integrations across 30+ restaurant POS platforms. Hands-on technically, and comfortable owning delivery end to end with vendors, engineers and country teams.

EXPERIENCE

Integrations Manager | Technical Product Manager, POS Integrations

Qlub **October 2025 - Present, Dubai, UAE · Remote**

QR pay-at-table platform: guests scan, view the bill from the restaurant's POS, and pay from their phone.

- Owned 112 POS integration tickets (106 as Product Manager), 67 of them shipped, across 33 POS vendors and 10 markets (US, UAE, KSA, SG, HK, UK and others).
- Shipped 8 new POS integrations on 7 platforms: Toast (pay-at-table and order-and-pay), Clover, Clover Sport, DimOrder, Lightspeed K-Series, Shoko and Zonal.

Integrations Manager, US Market **August 2026 - Present**

- Sole Integrations Manager for the US, accountable from first request to merchants live: business case, POS-partner kickoff, delivery plan, and coordination between developers, country sales/ops and POS vendors.
- Run a US onboarding pipeline of 32 restaurants, 18 of them live (October 2026).
- Shipped 32 POS deliverables in Q3 2026, the first quarter under the new integration operating model. That is about 2.7x the average of the three previous quarters.
- Turned a prototype into the POS team's production Integration Tracker (156 of its 197 commits). It joins Jira, HubSpot, Tableau and Google Sheets behind Google SSO, giving POS leadership and integration managers per-market, per-POS and per-developer views of delivery, SLAs and adoption.
- Co-led Qlub's entry into the UK with the Zonal (Comtrex) pay-at-table integration for a London restaurant-group pilot: ran the NDA, vendor calls and requirements, and it was deployed 16 days after the ticket opened.
- Delivered adoption-rate reporting on 5 POS (Clover, Square, Aldelo, Toast, Zonal), showing what share of each restaurant's dine-in payments runs through Qlub.

Technical Product Manager, POS Integrations **October 2025 - July 2026**

- Primary product manager for US and Korea POS integrations and secondary for Hong Kong: wrote specs, set acceptance criteria and signed off go-lives. Also served on the 5-person PM rotation for production incident triage.
- Led Qlub's official Toast partner integration through the partner application (technical spec and due diligence), sandbox verification and go-live sign-off. Pay-at-table shipped June 2026, and order-and-pay (5 features) followed in August 2026.
- Revived a Clover integration stalled since 2023 and shipped it in January 2026. Took the "Qlub Pay-At-Table" app through Clover App Market approval in June 2026, and shipped Clover Sport for stadiums and arenas 22 days after the ticket opened.
- Led discovery and a live pilot of an Oracle OPERA Cloud hotel PMS integration in Singapore, extending pay-at-table to hotel guest folios. 9 of 10 live API tests passed.
- Wrote Singapore's cross-POS standard for the government beverage-container deposit scheme (BCRS). It went live first on FnBees in May 2026.
- Designed a single rule-based tender-mapping configuration that replaced three separate setups (card, funnel, loyalty).
- Authored 22 Confluence documents (discoveries, integration and onboarding guides, go-live checklists) covering 10 POS/PMS platforms.
- Built AI-assisted (Claude Code) workflows for POS issue analysis, ticket drafting and onboarding-data reconciliation across 60+ integration repositories, and packaged them as reusable skills for teammates.

Software Development Contractor | Principal Software Development Engineer

Denning IT Sdn Bhd **January 2021 - Present, Malaysia · Remote**

Practice-management and ERP software for Malaysian law firms.

Software Development Contractor (project-based) **August 2022 - Present**

- Rebuilding Denning's legal practice-management system as a multi-tenant ERP (Laravel 12, Nuxt), as essentially the sole engineer since September 2025. It covers legal accounting with trust accounts, billing, ledgers and financial statements, plus HR and payroll, court diary, real-time chat, ticketing and role-based access. The backend has 1,100+ API routes.
- Built Denning Central Command, a control plane that syncs system templates (leave types, chart of accounts, roles) to every tenant's ERP database, along with multi-tenant file storage (FileVault) and notification services.
- Took over the Denning360 Flutter app for iOS and Android in February 2026, took it from version 1.0.29 to 1.0.87, and scripted TestFlight and Google Play publishing.
- Extended the Denning Premium legal management system module by module (2023-2025): matter codes, templates and forms, property management, backup with restore, office accounts and payroll.

Principal Software Development Engineer **January 2021 - July 2022**

- Designed and maintained a mission-critical product regulating internal work systems for a prestigious law firm, ensuring 99.9% operational reliability.
- Spearheaded the end-to-end architecture and development of the project as the sole developer, delivering the system on time and within budget.
- Engineered a high-efficiency software module, increasing data processing speed by 50% through the implementation of advanced algorithms and real-time analytics.
- Enhanced system performance by optimizing workflows, reducing response times by 30%, and improving data accessibility for users.
- Integrated secure access controls and compliance features, ensuring the system adhered to legal industry standards.
- Collaborated closely with law firm stakeholders to customize functionalities, achieving a 100% adoption rate across teams.

Full-Stack Developer

Hono Network Ltd **October 2025 - October 2026, New Zealand · Remote**

Professional networking platform focused on social impact (web, mobile apps, CMS).

- Set up the AWS platform as sole author of the infrastructure code: Terraform, Kubernetes on EKS (dev, staging, prod), VPN-only dev access, Grafana/Loki/Prometheus monitoring, and OpenSearch and ClickHouse analytics.
- Built Bitbucket CI/CD pipelines to ECR/EKS for the backend, CMS, website and landing page.
- Developed Go backend features: S3 media storage and async processing, email via AWS SES and Resend, onboarding and profiles, membership, reporting and feedback, post moderation, and app deep links.
- Reviewed and merged 134 pull requests across backend and web, and wrote the platform architecture document and the API contracts.
- Cut the cloud run-rate from about $1,200 to $450–500 a month (including a MySQL 8.4 upgrade that removed an extended-support surcharge) and restored production after a multi-day outage.

Senior Backend Engineer

Deemples Technologies Sdn Bhd **January 2026 - March 2026, Malaysia · Remote**

Golf tee-time booking platform for Malaysian golf clubs.

- Built the QiSoft Golf integration service (Node.js, Playwright on AWS Lambda, SQS FIFO with dead-letter queue). It syncs 14 clubs and about 15,000 tee times and supports booking, cancellation and pay-with-credit.
- Built a four-phase golf-club ERP integration framework in the Laravel API: tee-time sync, booking sync, and auto-pay of unpaid bookings, then hardened booking and payment race conditions.
- Added saved cards and e-wallets through Xendit, plus course add-on administration in the API and React dashboard.

Tech Lead

Perqara **July 2022 - October 2025, Jakarta, Indonesia · Hybrid**

- Directed three technical squads, driving collaboration and ensuring efficient delivery of high-impact projects.
- Delivered the company's first successful public-facing products, establishing a product-focused culture.
- Reported daily project progress and achievements to leadership and stakeholders, fostering transparency and alignment.
- Strategized and managed the technology division's budget, optimizing resource allocation and cutting operational costs by 20%.
- Defined and implemented Objectives and Key Results (OKRs), aligning team efforts with company goals and achieving a 95% target completion rate.
- Developed core features through hands-on coding, reducing development cycles by 30% and accelerating time-to-market.
- Recruited and onboarded high-caliber technical talent, maintaining a 95% retention rate and strengthening team capacity.
- Engineered robust infrastructure and service architectures (excluding mobile), ensuring 99.9% system reliability and scalability.
- Facilitated agile ceremonies, including grooming and sprint planning, improving team velocity by 15%.

Software Development Manager

PT Generasi Multi Indonusa **March 2020 - September 2020, Surabaya, East Java, Indonesia**

- Oversaw all aspects of technology within the company, managing a team of engineers and driving technical excellence across projects.
- Recruited, mentored, and managed a high-performing engineering team, increasing team productivity by 40%.
- Developed and implemented strategic budget plans, optimizing technology investments and reducing operational costs by 20%.
- Forecasted and planned future product development, aligning technology initiatives with business objectives and achieving a 95% on-time delivery rate.
- Designed and deployed comprehensive infrastructure solutions, ensuring system scalability and 99.9% uptime.
- Managed deployments across multiple environments, streamlining processes to cut deployment time by 50%.
- Actively contributed to hands-on coding, delivering critical features and maintaining code quality standards.
- Established robust server architectures, improving system performance and reducing response times by 30%.
- Implemented best practices in DevOps and CI/CD, increasing deployment frequency by 2x while minimizing downtime.

Software Engineer (Promotion - Gamification Squad)

Tokopedia **January 2019 - March 2020, Greater Jakarta Area, Indonesia**

- Designed and integrated gamification features into the product, increasing user retention by more than 20%.
- Developed backend systems to support gamification elements for both frontend and mobile applications, ensuring seamless functionality.
- Collaborated with team members to address challenges in gamification implementation and applied best practices to optimize engagement.
- Modified and upgraded gamification modules, improving performance and scalability by more than 25%.

Software Engineer

Sleekr - #1 HR & Accounting Software **August 2018 - January 2019, Greater Jakarta Area, Indonesia**

- Designed and developed a cloud-based accounting system used by 100+ businesses, ensuring 99.9% uptime and data integrity.
- Automated financial processes, such as invoicing, expense tracking, and payroll, reducing manual effort by 70%.
- Integrated tax compliance features, enabling 100% adherence to regional tax regulations.
- Developed a multi-tenant architecture, supporting seamless scalability for users across different business sizes.
- Collaborated with cross-functional teams to deliver a user-friendly interface, achieving a 95% user satisfaction rate.

Software Engineer

UangTeman.com - Pinjaman Online, Cepat & Terpercaya **September 2017 - July 2018, Greater Jakarta Area, Indonesia**

- Built a core lending system, supporting the processing of 10,000+ loan applications monthly.
- Integrated payment gateways supporting multiple methods, achieving a 99% repayment success rate.
- Automated loan application and approval processes, cutting turnaround time by 60%.

PHP Developer

PT Surya Anugrah Mulya **June 2016 - August 2017, Greater Jakarta Area, Indonesia**

- Built a real-time dashboard to monitor trades, risks, and broker performance, reducing manual oversight by 50%.
- Developed automated trading bots for MetaTrader, increasing execution efficiency by 80%.
- Managed trading servers, ensuring low latency and 99.9% availability during market hours.
- Integrated risk management tools, reducing margin call incidents by 25%.
- Automated financial reporting, decreasing report preparation time by 70%.
- Secured sensitive client data using advanced encryption, maintaining a 100% compliance record with financial regulations.

Web Developer

AdisaniSoft **June 2015 - June 2016, Greater Jakarta Area, Indonesia**

- Designed a scalable MLM system capable of handling 1,000+ users simultaneously.
- Developed a user-friendly website that reduced user onboarding time by 40%.
- Implemented complex compensation logic, accurately processing multi-tiered commissions for over 500 members.
- Integrated secure payment gateways, achieving a 100% error-free transaction record.
- Collaborated with stakeholders to refine system functionalities, increasing user retention by 20%.

Senior Web Developer

PT Empat Rantai Indonesia **June 2012 - June 2015, Greater Jakarta Area, Indonesia**

- Managed all technology operations, supporting about 5 clients across Ministry of Finance entities.
- Communicated with clients from the Ministry of Finance and subsidiaries, ensuring 100% compliance with requirements.
- Delivered tailored IT solutions that improved operational efficiency by 30% for government agencies.
- Oversaw IT infrastructure, deploying and maintaining systems with 99.9% uptime.
- Collaborated with third-party vendors, negotiating contracts that reduced costs by 15%.
- Supported end-to-end project implementation, achieving a 95% satisfaction rate from stakeholders.

EDUCATION

Bachelor's degree, Information Technology
Universitas Gunadarma · 2015

SKILLS

Product & Integrations: POS and payment integrations (pay-at-table, order-and-pay, pay-in-person / SoftPOS), POS partner programs, discovery and specs, go-live and restaurant onboarding, SLA and pipeline tracking, multi-market stakeholder management.

Industry Knowledge: Restaurant Tech & POS, Payments, Hospitality PMS, Software Development, SaaS, MLM Systems, Fintech Applications, Forex Trading Systems, Gamification Design, Accounting Systems, IT Infrastructure, Risk Management.

Other Skills: Budget Management, Agile (Scrum, Sprint Planning), Team Leadership, Stakeholder Collaboration, Reporting Dashboards, AI-assisted workflows (Claude Code).

Programming Languages: PHP (Laravel, Lumen), Go, Node.js, JavaScript/TypeScript (Express.js, Nuxt.js, React.js, Next.js), Dart (Flutter), HTML, CSS.

Tools & Frameworks: Jira, Confluence, HubSpot, Tableau, Postman, Redis, Ext JS, gRPC, GraphQL, AWS (EKS, Lambda, SQS, SES, S3, RDS), GCP (GKE), Kubernetes, Terraform, Playwright, Railway.

Databases: PostgreSQL, MySQL, MongoDB, ClickHouse, OpenSearch.

Technologies: REST APIs, OAuth, Webhooks, MetaTrader (MT4, MT5, Bots), Web Services, Real-Time Analytics, Signal Processing, Postfix.
